Basic Firefighter

Course Description

These courses are designed to provide entry-level firefighter skills. Students receive instruction in the primary factors affecting the start and spread of wildfire and recognition of potentially hazardous situations. Field time is encouraged, and many of the units are set up to be taught in either the classroom or the field. In a portion of this course, students engage in the process of designing their own safety program. The small groups will discuss and develop the L, C, E, and S, creating a list of performance standards. The entire class will then work together to produce and edit a contract, based on consensus, which guides performance. In a version of L-180, Human Factors on the Fireline, students will be able to practice decision-making skills in an interactive simulation as a member of a fire crew, and students will apply their Human Factors knowledge to a variety of scenarios.
